

Evaporation for reuse. Nature's way

Evaporation for reuse. Nature's way

... keep it simple

Evaporators for most efficient water recycling and quality for the Mint Industry

Evaporation. A natural method for reusing the most valuable resource on earth: Water.

Evaporation: Resource-Saving, Economic and Quality-Enhancing

Environmental thinking is not always expensive thinking. SPALECK has integrated the principle of evaporation for process water recycling into its broad product range.

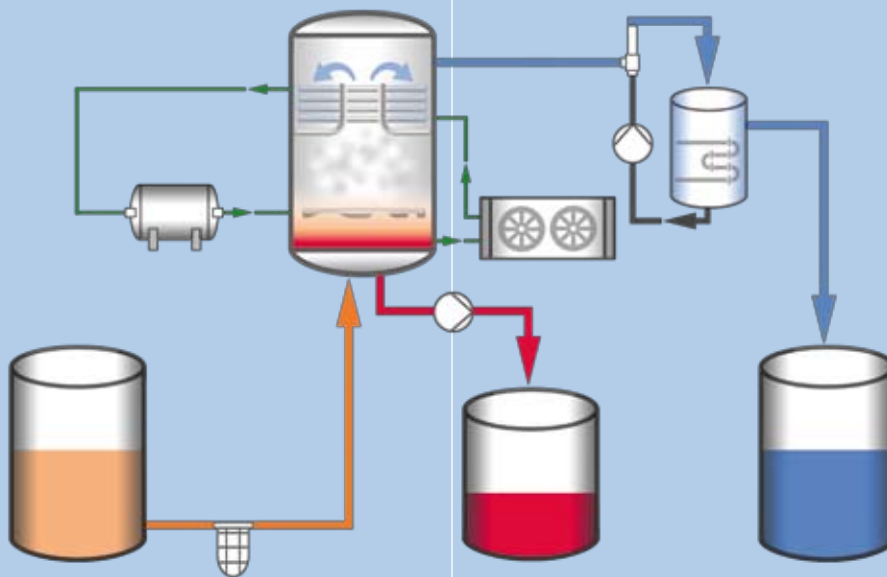

Production with a New Standard

Recycling of water is conserving our resources and saves costs at the same time.

Evaporation provides top quality recycled process water for highly sensitive treatments.

Advantages:

- ◆ Extremely high water-saving rate, due to total recycling
- ◆ Cost saving. Less water consumption
- ◆ Better process water quality for highest possible quality of blank surface
- ◆ Compliance to highest environmental legal standard
- ◆ Maximum of visible inspection and accessibility
- ◆ Understandable and touchable technic and process
- ◆ System with low maintenance
- ◆ Individual plant construction

Evaporation. Used for production, it saves costs, protects the environment and enhances the finishing quality.
